SIMULATED MEETING RAIL

Get the look you want. Choose from an assortment of Simulated Meeting Rail designs to make your Casement or Awning window match your home's style.

SIMULATED DIVIDED LITES

Simulated Divided Lites allow you to honor the traditional design of your home, while also taking advantage of industry-leading glass technology.

A spacer bar between the glass shadows the pattern of the Simulated Divided Lite grid, adding to the architectural authenticity of the window.

INTERNAL AND V-GROOVE GRID OPTIONS

Select a grid style to give your home a more inviting look, while maintaining ease of cleaning.

pureCORE TRIPLE PANE

A 7/8" overall triple-glazed insulated glass unit with two panes of eight coat low-e glass and one pane of sound absorbing glass sandwiching two chambers filled with high density argon gas is combined with a polyurethane foam frame to creates the AR90 and KR90 Glass Systems and achieve a R-5 rating.

		U-Factor	SHGC
AR90 (N3200a)	Double Hung	0.23	0.22
	Casement	0.21	0.20
KR90 (N3200k)	Double Hung	0.19	0.22
	Casement	0.17	0.20

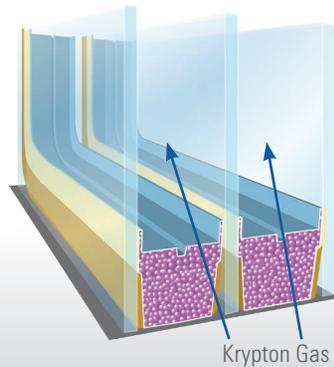

ARGON (AR90)

A 7/8" overall triple glazed insulated glass unit made up of two panes of 8-layer of low-e glass and one pane of clear glass. Complete with the MAXEdge™ spacer system and two chambers filled with high density Argon gas.

KRYPTON (KR90)

A 7/8" overall triple glazed insulated glass unit made up of two panes of 8-layer of low-e glass and one pane of clear glass. Complete with the MAXEdge™ spacer system and two chambers filled with high density Krypton gas.

WHAT ARE R-5 WINDOWS?

R-5 windows are highly insulated windows with top tier energy-efficiency for cold and mixed climates. KR90 triple pane windows ensures that the best value and insulation is being put in the home.

ENERGY STAR® qualified windows are rated at a U-Factor of 0.27, which falls in a R-Value of 3. These ratings reduced the average heat loss through the window by more than 30% and saves money on energy bills. Any rating above this would result in more savings.

pureCORE FRAME

The pureCORE frame is designed to match the beauty and elegance of a wood window with its narrow lines and dedicated extrusions. A coved, mitered interior glazing beads add styling and additional security. It is mulled with one of the narrowest systems available to maximize the viewing area by 27% in relation to our competitors.

The frames are all fully fusion-welded to provide a stronger and more airtight window than mechanically fastened competitive products. It is actually one of the lowest published air leakage rates available in the marketplace. It also doesn't have any weep holes which can be unsightly to the eyes and keeps water from entering and rotting the window.

Every window frame is made from iUPVC, a high tech, synthetic polymer that offers significantly better energy efficiency and resistance to the degrading effect of UV light than wood or metal windows. The truly insulated mainframe feature two chambers of insulation, the same insulation that is found in high-end coolers. This offers seven times better R-values and two times better insulation than a competitor's hollow frame.
